THE TUNING SHOP FOR YOUR
PREFLOW DISPENSER!

The standard is to use snow tyres for motor vehicles to receive optimum performance of your car under harsh weather conditions. The tyre for the cold season is made out of a different elastomer combination which is responsible for optimum grip and minimized wear at wintery road conditions. Comparably to this we offer a special elastomer combination for our products – **VisLas** – which enables us to guarantee performance at its best with highly filled or abrasive fluids. Due to this particular mixture the lifetimes can be 2 to 3 times higher, depending on the application.

The snow tyres for your
eco-PEN and eco-DUO450 and 600
Elastomer: **VisLas**

450
Art.-Nr.:21384

600
Art.-Nr.:21438
